

## Working with Web Editors and Web Browsers

### **VIEW WEB PAGES**

#### **Common Types of Browser:**

IE – Internet Explorer  
Firefox  
Netscape  
Opera  
Safari

### **EDIT WEB PAGES**

#### **Common Types of Web Editors:**

Text Editors – Notepad  
Dreamweaver  
Frontpage  
MS Expression Studio  
NVU (free)

### **WEB PAGE EXTENSIONS**

#### **Common types of Web File Extensions:**

.htm – hyper text markup  
.html - hyper text markup language  
.php Hypertext Preprocessor  
.aspx – active server page extensible  
.xml – extensible markup language

Most homepages will be called Index.htm

In this class we will constantly be moving between Web Editor and Web Browser.

### **To Create and Change Web Pages:**

Our web pages will be stored in a folder titled “your first name” on the “C” drive of your computer. Open and save files to this folder:

C:\Ben

### **To view your pages in the web browser**

File\open go to the name of C:\YourFolderName and open the htm or html page that you want to view in the browser.

Also from Dreamweaver you can hit F12 to view the webpage your currently working on in the browser.
